- 2 **Hydrometeor classification: Hail detection**
- 3 **Conclusions and perspectives**

Hydrometeor classification: the problem

A number of radar observations, hopefully corresponding to precipitation...

- Z_H : concentration, size and density
- Z_{DR} : shape, orientation and density
- K_{dp} : concentration and shape
- ρ_{hv} : homogeneity
- + phase indicator: liquid/melting/solid

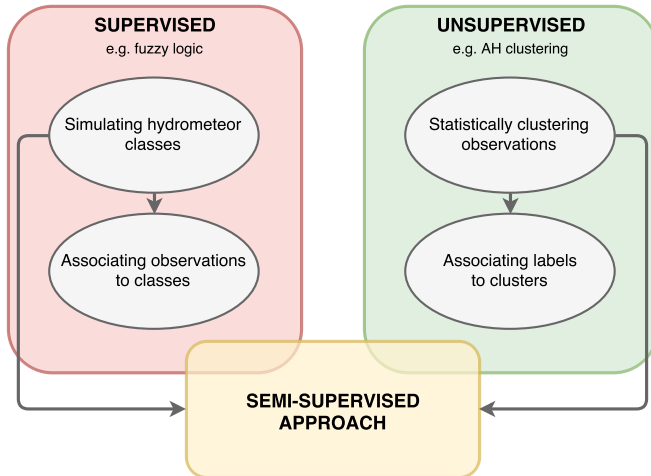

Hydrometeor classification: the solution

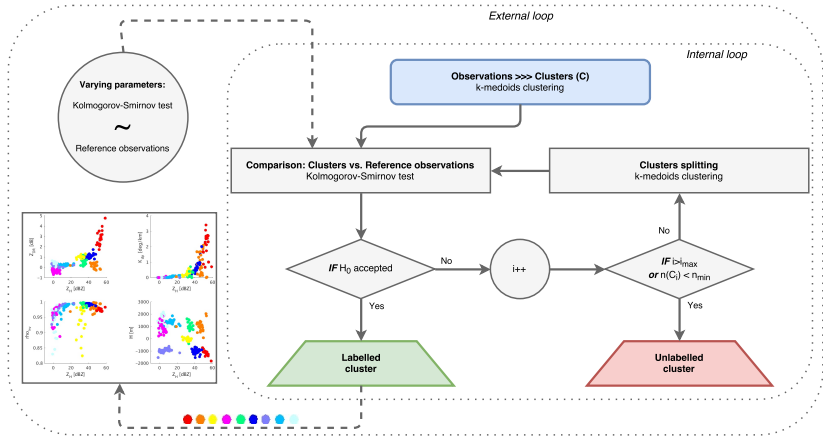

Proposing a method which can properly associate to each of these observations a label
-
a hydrometeor type

- Z_H : concentration, size and density
- Z_{DR} : shape, orientation and density
- K_{dp} : concentration and shape
- ρ_{hv} : homogeneity
- + phase indicator: liquid/melting/solid

Schematic generalization of hydrometeor classification methods

The schematic representation of the centroids derivation algorithm

Basic, N., Figueras i Ventura, J., Grazioli, J., Gabella, M., Germann, U., and Berne, A.: Hydrometeor classification through statistical clustering of polarimetric radar measurements: a semi-supervised approach, *Atmos. Meas. Tech.*, 9, 4425-4445, 2016.

Examples of PDFs estimated by means of Kernel Density Estimator (KDE) along with the centroids from all iterations, for MXPoL (left) and DX50 (right) X-band datasets

Rain

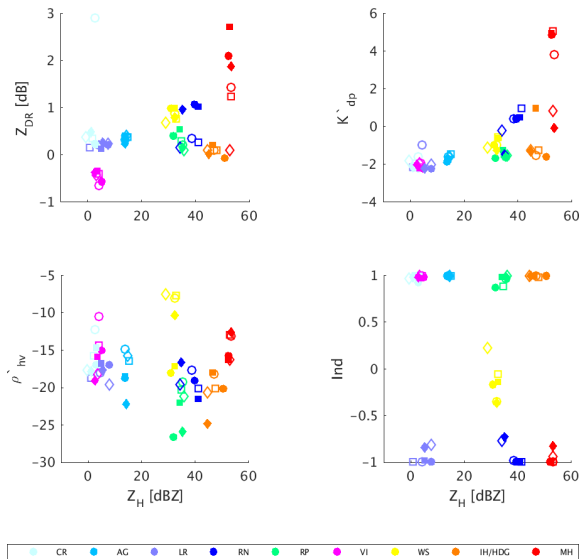

Ice hail/High density graupel

Melting hail

Centroids for Albis (○), Monte Lema (□) and Plaine Morte (◇) radars: before (empty) and after (filled) attenuation and noise corrections

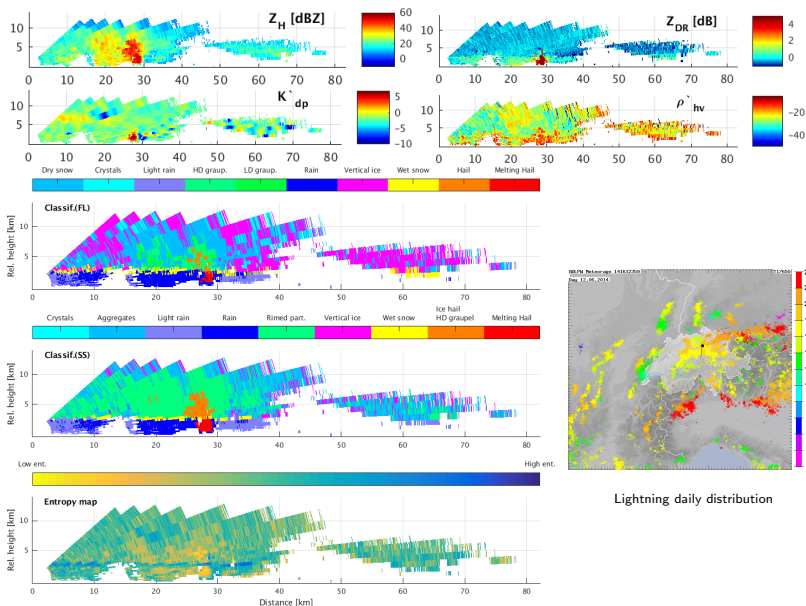

Pixel assignment & Min-entropy as a measure on uncertainty

Example of pixel assignment:

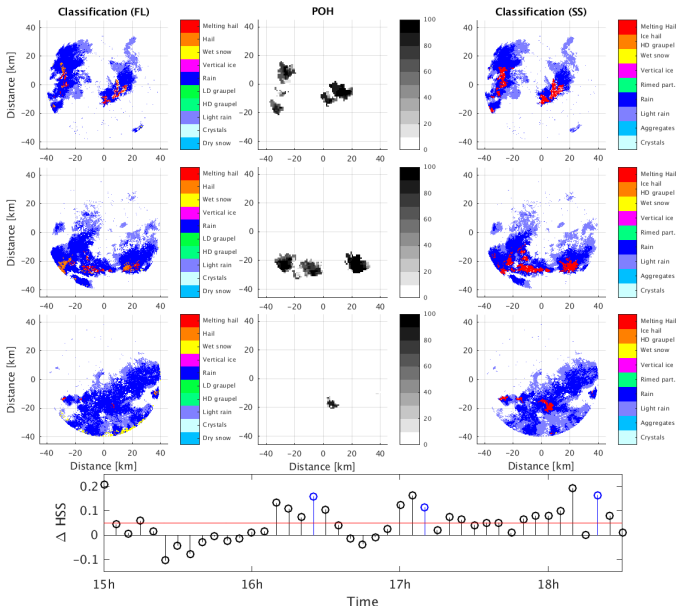

- (left) lower entropy: 0.2753
- (right) higher entropy: 0.4756

C-band Albis reconstructed RHI profile, 187° azimuth, 17h30, 12/06/14

Hail detection by means of a polarimetric hydrometeor classification algorithm

C-band Albis radar, PPI 2.5° elevation, 12/06/14

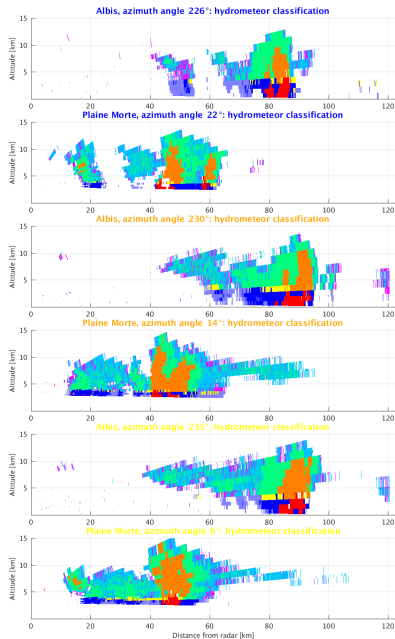

Hail detection by means of a polarimetric hydrometeor classification algorithm

Thun case study

6 June 2015

15h55, 16h40 and 16h55

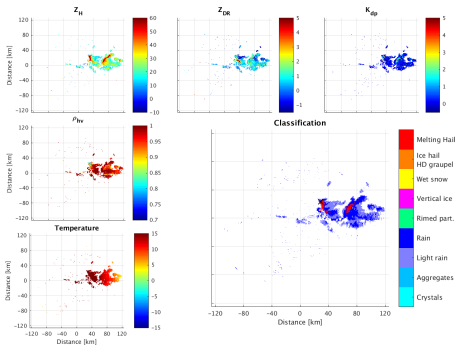

Thurgau case study

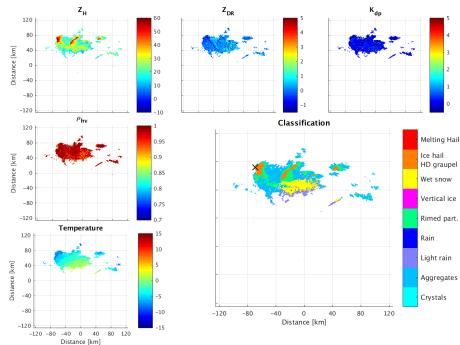

27 May 2016
Hailstone sensor in Aadorf (×)

Albis, PPI ($\theta = 0.4^\circ$), 18h18m25-18h18m45

Weissfluhgipfel, PPI ($\theta = 0.4^\circ$), 18h18m25-18h18m45

Thurgau case study

27 May 2016

Hailstone sensor in Aadorf

Albis, RHI ($\phi = 57^\circ$), 18h15-18h20

Weissfluhgipfel, RHI ($\phi = 316^\circ$), 18h15-18h20

Conclusions and perspectives

Conclusions

- volumetric observation of hail cells
- improved hail detection with respect to the classical HC
- compliance with the POH and hail-sensors

Perspectives

- hail sub-classification relative to the size of hailstones
- volumetric radar composite
- database of hail events

Danke! Merci ! Grazie! Grazia!
